Technical Skills

Programming Languages: JavaScript/TypeScript, C#, HTML, CSS, C++, Python

Automation & BI: Power Automate, Power BI, Tableau, RStudio, Excel, JSON, APIs

Microsoft 365: Outlook, Teams, SharePoint, OneDrive, Permissions, M365 Admin

Scripting & Tools: SQL, Bash, Git, Jira, PowerShell (basic)

Frameworks & Platforms: FastAPI, Node.js, Next.js, React, Vite

Databases: PostgreSQL (SQL), MongoDB (NoSQL)

Cloud: AWS, Google Cloud Platform (GCP)

Soft Skills: Troubleshooting, documentation, communication, cross-team collaboration

Experience

Terravan Solar

June 2023 – May 2024

Software Engineer Intern

- Developed embedded diagnostic tools enabling real-time battery monitoring through JSON communication between Arduino ESP32 and Android devices.
- Integrated and improved communication libraries for battery management systems, enhancing reliability and data consistency.
- Participated in Agile sprints, supporting feature development, structured debugging, and collaborative problem-solving.
- Produced internal documentation to streamline onboarding and troubleshooting for the engineering team.

Amazon Sortation Warehouse — Part-Time Associate

Nov 2020 – Aug 2021

- Coordinated with leads and team members to ensure smooth daily workflow in a fast-paced logistics environment.
- Followed safety and warehouse protocols to maintain a secure and efficient work setting.
- Interpreted work orders and sorting instructions with accuracy to support operational efficiency.

ARCO AMPM — Part-Time Cashier

Jul 2018 – Oct 2020

- Delivered customer service by resolving inquiries, assisting with purchases, and handling transactions accurately.
- Addressed and de-escalated customer concerns, providing clear communication and appropriate support.
- Performed cash handling, basic accounting, and register balancing during daily operations.

Projects

QR8 – Automation-Ready QR Code System

2025 – Present

- Created a modular full-stack application using React, Vite, and FastAPI for generating structured QR code outputs (URL, WiFi, vCard, text).
- Built FastAPI backend endpoints with clean data handling, validation, and JSON responses suitable for automation workflows.
- Developed a polished, responsive UI with customizable QR options including gradients and embedded logos.

Alky – Transaction Tracking & Reporting Tool

2025 – Present

- Designed a financial tracking tool enabling categorized expenses, account management, and user session handling.
- Created visual reports and dashboards using Recharts for budgeting and data interpretation.
- Implemented efficient database operations and a user-friendly interface prioritizing clarity and usability.

Data Analysis & Visualization Projects

2024 – 2025

- Built interactive dashboards using Tableau and RStudio to visualize trends such as churn, medical analytics, and social media performance.
- Cleaned, transformed, and validated datasets using Python, SQL, and Excel for accurate reporting.
- Developed insight-focused visualizations to support decision-making and highlight actionable trends.

Education

California State University – Long Beach

May 2025

B.S. in Computer Science

Relevant Coursework

Data Visualization, Software Development with Frameworks (ASP.NET MVC + Razor), Databases, Networks, Algorithms, Operating Systems
