Education

California State University – Long Beach
Bachelor of Science in Computer Science

May 2025

Technical Skills

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS, Tailwind CSS, Responsive Design
Backend & APIs: Node.js, FastAPI, REST APIs, JSON, Prisma
Databases: PostgreSQL, MySQL, MongoDB
AI Development: Codex, Claude, ChatGPT, GitHub Copilot, AI-Assisted Development Workflows
Tools & Deployment: Git, GitHub, Vercel, Linux, Bash, Jira, Figma, AWS, GCP
Engineering Practices: Component-Based Architecture, Debugging, Code Reviews, Agile/Scrum, SDLC

Experience

Terravan Solar June 2023 – May 2024
Software Engineer Intern

- Developed software features supporting real-time communication between ESP32 embedded systems and Android applications using structured JSON data.
- Integrated and debugged C++ communication functionality for battery management systems, validating data flow across hardware and application components.
- Collaborated with engineers in Agile sprints to implement features, troubleshoot defects, document system behavior, and improve maintainability.

Projects

Kinethic – Workout Tracking Web Application 2026 – Present

- Developed a responsive, mobile-first workout tracking application using Next.js, React, TypeScript, and modern component-based frontend architecture.
- Built reusable interfaces for workout sessions, exercise selection, user profiles, rest timers, workout history, and progression recommendations.
- Used AI coding tools including Codex and Claude to accelerate implementation, refactoring, debugging, and documentation while reviewing and validating generated changes through local testing and Git workflows.
- Deployed the application with Vercel and iteratively refined responsive layouts and user flows across mobile and desktop experiences.

DROCSID – CSULB Senior Capstone Project Jan 2024 – Dec 2024

- Built a real-time web application with authentication, messaging, file sharing, and REST API integration using React and Node.js.
- Integrated PostgreSQL through Prisma for persistent storage of users, messages, files, and application metadata.
- Collaborated in an Agile team using GitHub and Jira for sprint planning, code reviews, debugging, feature development, and technical documentation.

SRB Construction and Engineering Services Website June 2024 – Jan 2025

- Developed and deployed a responsive company website using Next.js and Tailwind CSS with reusable UI components and mobile-friendly layouts.
- Translated client requirements into Figma prototypes and production interfaces through iterative design reviews, testing, and feedback.
